

Emissions from Waste (ON Power)

The graphs below display the goals and estimates of actual emissions from waste coming from ON Power's operations from 2015 – 2030 and the achievement towards this goal. This goal was not met in 2018 in terms of total emissions, though emissions from waste per employee did meet this goal. Emissions from waste are calculated according to the category of waste (e.g. general waste, paper, plastic, etc.), the quantity of this category, and an estimate of how this waste is treated (e.g. landfilled vs. recycled). The emission factors for these different treatment options and waste categories are derived from the U.K. Energy Agency.
