

Emissions from Fuel Use due to the use of Vehicles, Equipment and Generators by Veitur

The following graphs display the goals and estimated actual emissions coming from Veitur's use of vehicles, equipment, and generators from 2015 – 2030 and the achievement towards these goals. In 2018 the goal was not met, but Veitur was able to decrease emissions below the 2015 baseline and on a per-employee-basis the goal was reached. There are few options in terms of cleaner generators and equipment, but Veitur will continue to work to shift the vehicle fleet to low or zero emission alternative vehicles.
