

Emissions from Reykjavik Energy Group's Car Fleet

The graphs below display the goals and estimated actual emissions coming from Reykjavik Energy Group's car fleet from 2015 – 2030 and the achievement towards these goals. In 2018, the goals set out by the group were not achieved, though on a per-employee-basis the goals were reached both in 2017 and 2018. Considerable progress has been made in transitioning the Group's car fleet from traditional fossil fuel vehicles to alternative fuel vehicles, leading to the consistent decline in emissions from the car fleet. In 2018, it was decided that all car fleet emissions would be offset through reclamation of wetlands by the certified Votlendissjóður, which can be seen in the 2015-2018 Environmental Statement from the Reykjavik Energy Group.
