

Opportunities to reduce greenhouse gas (GHG) emissions at the Reykjavik Energy Group

The graphs show the projects that have been undertaken by introducing climate targets to reduce GHG emissions from the Reykjavik Energy Group from 2015-2018. Furthermore, the climate goals of reducing emissions from 2019-2030. The upper graph shows the effects of all the Group's emissions reduction projects and highlights specifically the projects with the most significant impact on emission reductions. In the lower graph, the tasks and achievements of "Other" on the upper graph are shown and these are projects where each employee has an impact on the outcome. These projects are of no less importance than the bigger projects.
